Note

*...the application with the certain series

The Robo series is a motorized lighting system that uses wireless control technology. In high ceilings and those applications requiring dynamic lighting scenarios, labor costs and other maintenance fees can be reduced.

In order to provide a better lighting experience and simpler control methods in these areas, we chose wireless control technology to design the Robo series. In addition, they are able to pan and tilt to adjust the illumination angle, the light can also be zoom-in and zoom-out to change the beam angle, creating more possibilities for lighting.

ON uses a stepping motor to power the Robo series. Reducing the deceleration noise when a servo motor stops, it also controls the stroke of the lamp more accurately, allowing users to operate the APP interface more easily and know the precise rotation angle and illumination angle of the fixtures.

For a better understanding of Robo series' application. ON distinguishes between environments that require different motorized lighting and provides various appropriate wireless control solutions accordingly to different lighting needs.

Robo series' application

	Big site Ceiling height 6-8m 100 or more fixtures	Medium site Ceiling height 4 -6 m 30-100 fixtures	Small site Ceiling height 3 -4 m 1-30 fixtures
Frequently dynamic lighting (eg. car show room)	LynxPro**	LynxPro** LynxLite* 2.4G	LynxPro** LynxLite* 2.4G
Repeated lighting scene (eg. ballroom, lobby, international conference room)	LynxPro**	LynxPro** LynxLite*	LynxPro** LynxLite*
Occasional lighting adjustment (eg. museum, gallery, retail window)	LynxPro** 2.4G	LynxPro** LynxLite* 2.4G	LynxPro** LynxLite* 2.4G

Notes:

*... LynxLite (Bluetooth)

**... LynxPro (ZigBee)

Create your own lighting scenarios

Use RoboTrac and RoboCan to create your own lighting scenarios. This series allow you to create, save and retrieve the right lighting ambience for every situation. On business premises or in hotels, for employees, clients or visitors - the intelligent technical features and timeless design of ON lighting technology guarantee a pleasant atmosphere. It's all ON you!

Mesh Network

Easy mesh network set-up and self-healing features help users to focus on lighting applications for scenes, scheduling, daylight harvesting etc. Flexible options available to meet all user needs: with gateways for large-scale deployment or via 2.4 GHz remote control for small applications.

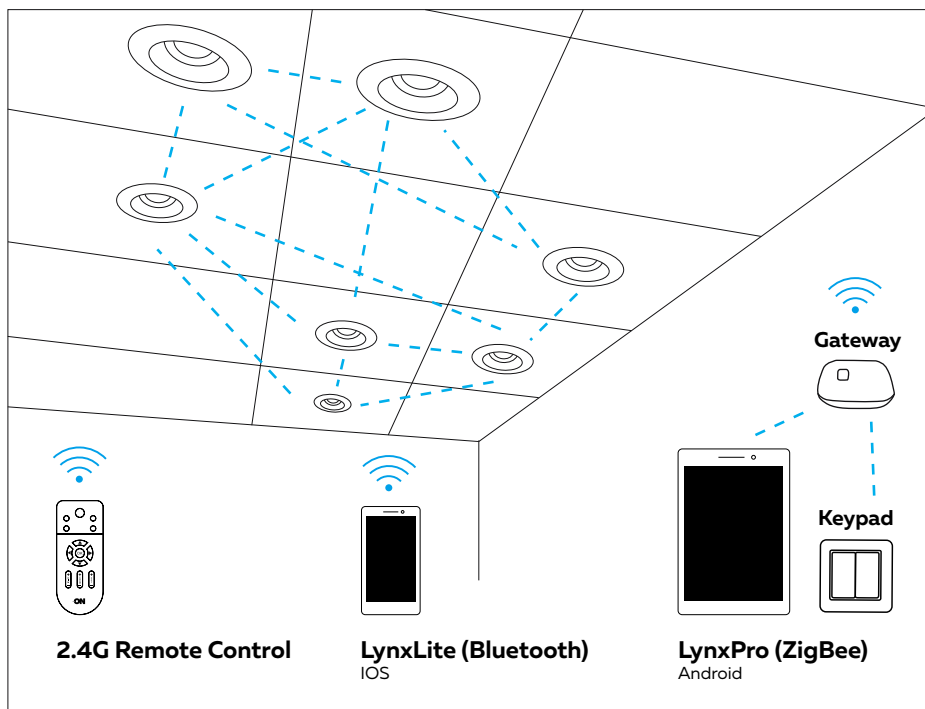

Motor Control

The motorized light is controlled by three stepper motors. The light head can be tilted by 30° in both directions and rotated horizontally by 355°. All the movements of the fixture can be remotely controlled via the app.

Light Control

For fixtures of this type, press the individual device icon to display the "Light Control" panel. For dimmable light, the panel only contains a level bar and on/off switch, while for colored dimmable light, it contains a color wheel and color temperature bar. Select "Switch to Color Temperature mode" to change to a different control panel.

* ZigBee keypad can be chosen from the market, for example Jung / EnOcean.

Description

RoboTrac is available in 3 optics: 7° narrow angle, 24° medium angle and zoomable (12°-55°), with its lamp body diameter in 90mm.

Die casting lamp body offers a better heat-dissipation capability. Poly carbon gearbox gives the wireless module a better transiting condition if it is not to be shielded by a metal case. Three DC stepping motors drive 3 axis movement of the fixture. Tilting 90°, rotating 355° and zoom optics from 12° to 55° which allow users to adjust the light beam easily.

Stepping motors, meanwhile, provide a tranquil control experience by the ZigBee control method. Users can control every step by the app, which allows professional users to adjust the luminaire precisely. Moreover, the ZigBee version is capable of creating and memorizing multiple zones and scenes. By connecting a gateway allows a wifi-free environment. Users can recall the scene with just one click. All the movements of the fixture, beam-shaping, brightness and the color tuning will change just-in-time.

Universal joint

Enables 90° vertical tilt and 355° horizontal rotation. Available with three-circuit track adapter.

Optical

The beam spread can be adjusted smoothly and seamlessly from 12° to 55° with ample light output. Fixed angle 7° and 24° lenses are also available.

Body

Motorized track spotlight with die-cast body and aluminum joint for structural sturdiness and better heat dissipation.
